

**Blc. Edisto 'Carol'**  
**AM/AOS**

84 pts, 6-23-18

(Maria Ozzella x  
Oconee)

**\$450**

5" pot fully  
established, 5  
mature bulbs  
and one new  
growth

Very recent award to one of the best of the grex. Edisto has been one of the most successful hybrids produced from Oconee, not only for the dark, beautiful flowers, but also for its success in breeding. It is difficult to use Edisto and not come out with something good. The award description on 'Carol' says "...sepals and petals deep dark fuchsia....lip ruffled and extremely dark.." Plant offered is of the original mother plant obtained from Bill Owen of Owen's Orchids in July of 2008.

**Blc. George King**  
**'Serendipity' AM/ AOS**

82 pts, Awarded 1975

(Buttercup x Bob Betts)

Registered by George  
A. King, 1970

**\$600**

Three mature  
bulbs, one in  
sheath plus  
new growth  
just starting.  
Own a piece of  
true orchid  
history. Still  
virus free after  
44 years!

This grex has been a prolific breeder with 106 first generation offspring with 22 of them having received AOS awards. Not only is it a good breeder, it produces beautiful exhibition sized art shade blooms. The division offered is from the original mother plant. A friend who knew Mr. George King in Sacramento CA got a division from him and shared it with me many years ago. Division offered is from one of my over-the-pot divisions where I let a lead at the edge of the pot grow roots for one year into a pot hung under the lead. Mix is added as the roots grow, then the division is cut from the mother plant fully established with its own pot full of roots.

**Blc. Honolulu Sunset**  
**'Wakida' AM/AOS**

85 pts, 1989

(George Angus x  
Waikiki Sunset)

registered in 1985 by  
Carmela

**\$450**

6" pot,  
established, 8  
bulbs

This is a large flowered beauty that truly has sunset colored blooms supported by strong stems. Rare in collections and seldom offered.

**C. loddigesii 'Shorty'**

Two divisions of the original mother plant

**\$200**

One 5" pot with 8 mature bulbs that have all flowered plus one in sheath. Pot full of roots and new roots initiating on both plants.

**\$250**

Second pot is 6", 10 old growths that have bloomed plus two new growths in sheath

A true genetically dwarf version of the species. Typical shell pink flowers, very flat and showy. Bulbs only get about 6" tall on a fully mature plant. Interestingly, this is one parent of the cross made by James Rose of Cal-Orchid that produced probably the most stunning C. loddigesii to ever be shown for an award, the clone called 'Mai Short Sweetheart'. The other parent was 'Sweetheart' AM/AOS 86 pts. When exhibited, it received an FCC/AOS of 90 pts with 101 flowers and a CCE/AOS of 94 points. Additionally, the plant/photo won the prestigious Masatoshi Miyamoto Award of 2008, the Cattleya alliance winner of the year.

**C. mendelli 'Stewart's Baby'**

Typo color form for the species, very vigorous and can make multiple leads that all flower at the same time. Originally came from Stewart Orchids in CA.

**\$150**

One 5" pot, 5 bulbs, one in sheath, new roots starting, ready to be up-potted to 6"

**C. nobilior 'Fabio Nahas'**

This is one of the finest of the amaliae color forms. I got this from a friend who purchased a 3 bulb division from Mr. Fabio Nahas in Brazil. It is the most vigorous and floriferous of any C. nobilior I have seen. Sweetly fragrant and long lasting blooms. Definitely awardable.

**\$500**

One plant just up-potted from 6" to a 7" pot, 6 bulbs with leaves, 7 old bloom growths with new lead and pot full of roots.

**\$350**

Second division, bare root, 4 mature bulbs, 5 old bloom growths, ready to start a new growth

**C. percivaliana alba 'Charito' AM/AOS**

82 pts, 2014

**\$750** First time offering a division of my awarded plant. Obtained from a grower in Brazil and awarded on my first blooming. This is a mature bulb, 4 stunning true alba, not albescens which would show some tinting when grown in high light. one in sheath

**C. schroederiae alba  
'Rehfield'**

**\$250**  
5" pot, 5  
mature  
growths and  
one new lead

Division of original plant from the late Jerry Rehfield in California. It has sometimes been called 'Hercules', but it is not the 1932 awarded plant by that name, thus I call it after the person that I got the plant from to keep it from being confused with the awarded plant. It is a true alba which is rare, not albescens that would have a tinge of pink when grown in high light. Easy grower, vigorous and reliable bloomer.

**C. walkeriana 'The  
Chairman' AM/AOS**

81 pts, 2005

**\$275**  
5" pot, 4 bulbs  
with leaves.  
Original  
mother plant  
division

Fine tipo color form with broad, rounded petals. Great parent that has produced other awarded offspring. Division of the awarded plant from Fred Missbach, originally from Suwada Orchids, Japan, came to the US via Cal-Orchid.

**C. walkeriana  
'Welcome Back'**  
81 pts, 2015

**\$350**  
6" wooden  
basket, 6  
bulbs with  
leaves  
Division of  
original mother  
plant

I sold a division to the person that got the plant awarded. Of all the tipo color forms I have seen, this has the most intense color of all. The flowers are exceptionally large and I feel certain that the award will be upgraded. Originally a small unbloomed seedling from Alan Koch of Gold Country who told me he got the seedlings from Brazil. It was one of only a few plants that survived my greenhouse burn up in 2002 and was the first survivor that bloomed for me afterwards.

**C. Penny Kuroda  
'Spots' AM/AOS**  
82 pts, 1996

**\$125**  
Established 1  
year, 6" pot, 7  
bulbs, 4 with  
leaves, just  
flowered

Awarded with 14 blooms on 1 spike. Fabulous, well-shaped peloric flowers on a tall stem that supports the head of blooms with no staking needed. Bi-foliate growth that can get up to about 2' tall. Internodes are short and plant stays in the pot for many years without needing repotting. Prolific breeder with 138 first generation offspring giving rise to almost every color imaginable with clear colors, spots, or flares.

**Enc. alata 'Granier's Gran Sun' AM/AOS 84 pts (1999),  
CCE/AOS 93 pts (2001), CCE/AOS 96 pts (2004)**

This is undoubtedly the most famous Enc. alata in the world, not only for its fine flowers but for what Mr. Ervin Granier accomplished in growing this to utter perfection. When I got my division from Ervin, he told me he originally got the plant in flask from Mexico and even in flask, this one plant stood out from the other seedlings. He mothered it along to achieve 3 awards, the AM quality award and 2 CCE awards, the last being 96 points with 1767 flowers on 31 spikes. This is not an easy plant to get established from a fresh division if done at the wrong time. My original one bulb division took over 2 years before it rooted, shriveling from the size of an orange down to the size of a prune. However, over the years it has grown well.

**\$250**

I have one 5" pot fully established 2 years, 3 mature bulbs, one that just flowered plus a new growth and new roots.

**Epi. baculus 'Lynn Spooner'**

*photo by Mauro Rosim*

**\$40**

Offering 2 plants, established in 4" pots

Named for the previous owner of Too Goo Doo Vandas in SC who also collected rare and unusual species. This species has tapering bulbs that resemble upside down green carrots, tipped with two stiff leaves. Blooms emerge from between the leaves on a short stem, always two blooms back to back and appear to be upside down. Would grow well in a basket. The fragrance is heavenly... reminding me of vanilla and jasmine mixed together.

**Lc. Ecstasy 'Orchidglade'**

(Clara Schreiver x Aconcagua)

**\$375**

Offering one 6" pot, established one year, 6 mature bulbs, 2 new leads

How this has escaped earning an award baffles me. It is one of the finest, consistent semi-alba in existence with a solid dark lip and bright white segments with superb shape. Makes multiple leads on a well grown plant that often all flower at the same time. Plant is an original mother plant division from the late Nat Carson's collection who owned Blooming Orchids in Apex, NC. Mr. Carson got the plant from his friend, Robert Scully Sr. who co-owned Jones and Scully orchid nursery in Miami, FL.

**Lc. Lee Langford  
'Copper Sun'**

(Calizona x S. J.  
Bracey)

**\$500**

I have one 5" pot ready to up-pot to a 6", 9 mature bulbs and one new growth

If you are familiar with heritage heirloom Cattleyas, you will know the famous stud plant called Lc. Lee Langford 'Copper Queen' that is responsible for at least 45 awards in its progeny. Some years ago I obtained some seedlings from a selfing of 'Copper Queen' and have flowered most. The flowers have been all over the board as for color and shape. However, one is a glaring spectacle of color overlaid on yellow/orange background. The color does not fade. It has been a good grower and reliable mid-late summer bloomer. I have only let one other person have a division of this for security. I do suspect it will breed very nice art shades, dark things, and even good reds. After several seasons of blooming, it has shown zero tendency to cripple unlike the mother plant, 'Copper Queen', for which some growers used the nickname 'Cripple Queen'.

**Lc. Paradisio  
'Colossal' HCC/AOS**

exhibited in 1959 by  
Fred Stewart Inc.

(Robertiana x Remy  
Chollet)

registered in 1946 by  
Charles Sladden of  
Belgium

**\$550**

One fully established division, 6" pot, 5 mature bulbs, ready to break a new eye. Oldest leaf has a spot of sunburn from 4 years ago when the greenhouse was recovered

This heirloom plant is one parent of the famous pink Blc. Pamela Hetherington 'Coronation' FCC/AOS along with 47 other 1st generation offspring. Many renowned orchid firms such as Stewart, Armacost, Gore, Rod McLellan Co., Altenburg, Jones and Scully and 10 others used this as a stud plant. My plant is an original division of the mother plant that was given to a friend of mine named Ruben Post who got it directly from Ernest Hetherington at Stewarts. Blooms are "colossal" sized on a well grown mature plant. Rarely offered and very few collectors own this plant. Tested +cymv but asymptomatic.

**Lc. Pirate King 'Port  
Wine'**

(Lee Langford x  
Quadroon)

registered by Stewart  
Inc. in 1962

**\$250**

6" pot, established for 1 year, 6 bulbs, 4 with leaves and one in sheath

Famous breeder producing dark offspring such as Burdekin Storm, Pirate's Fortune, and Leonard Smith and even some splash petal offspring such as Petticoats. Rarely offered or seen in collections.

**Lc. Yung Hua  
'Bourdette'**

(Chine x Seattle  
Heights)

**\$400**

6" pot, 10  
mature bulbs  
with 2 new  
growths

Chine produces some of the most beautiful lips in hybrids of any yellow stud plant known, and this is no exception. It also "cleans up" and intensifies yellow color, and again, it did not disappoint. Originally offered by Stewart Orchids in their 1998 catalog on page 15. Rarely ever seen in collections.

**Pot. Amangi 'Orchidglade' BM/SFOS**

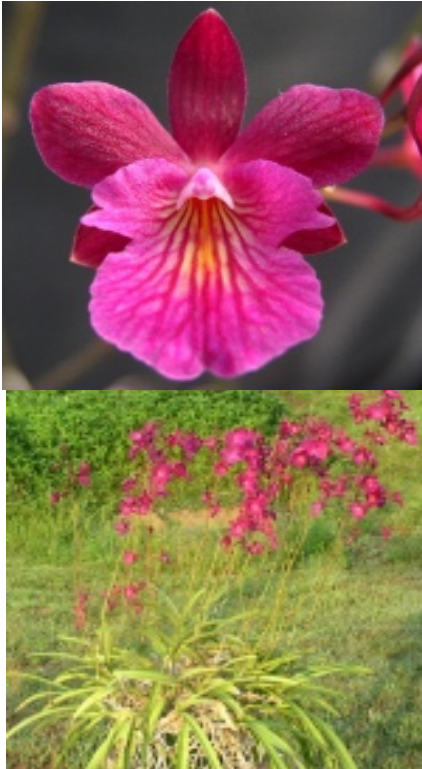

Shown by Jones and Scully, 1986.

(Antonica Fredrick x Maggie McKenzie)  
Registered by Jones and Scully in 1979

The plant was offered by J&S and Hausermann during the 80's and early 90's. Seldom seen in collections any more. Rich bright, saturated red with up to 5 blooms per spike on a well grown plant. Makes a great specimen with multiple leads blooming at the same time.

**\$125**

Two establishing plants offered, each with 5 mature growths and one new lead. The new lead may be too small to bloom, but plant may throw a second lead to bloom next spring.

**Tetratonia Dark Prince  
'Breckinridge'  
HCC/AOS**

Awarded in 1989

**\$75**

One 4" pot, 11  
growths with  
leaves, 5  
previous  
bloom spikes

Very interesting primary hybrid between *Broughtonia sanguinia* and *Tetramicra canaliculata* created by the famous Hawaiian breeder named W.W.G. Moir in 1965. Mark Rose of Breckinridge Orchids got the plant from Alan Koch of Gold Country Orchids who said he could not grow it in his arid conditions. It grows well in the humid south.

Dear Friends,

If you are looking for mass produced, cheap, fluffy orchids from Taiwan, then you have come to the wrong place. This list of rare heirloom and unique clones includes established plants and those that I can get a bare root division from. Each is noted as such. For most plants, there is only one available, but inquire just in case. Most plants will have a photo taken by me. I will be glad to provide a photo of the actual division you are interested in.

I will take orders by email and confirm orders by the date/time that the email was received. I prefer payment in cash, USPS postal money order, or Western Union. Checks are ok if I personally know you or if you want to wait till it clears the bank before I ship. I do not have the ability to accept credit cards or Pay Pal.

My mailing address is: KEITH DAVIS, 6767 HIGHWAY 29 BUSINESS, REIDSVILLE, NC 27320. If you have questions, please feel free to contact me at [dowiana51@gmail.com](mailto:dowiana51@gmail.com). Thanks.

Keith Davis
